

Neuter and chip your cat for £10

Cats Protection recommends that cats are spayed or snipped at around four months of age or younger. Once done, the cats live longer, healthier lives and it is the most humane way to stop unwanted pregnancies. Spaying or snipping also prevents some cancers, helps stop the spread of FIV (feline immunodeficiency virus), reduces straying, fighting and spraying. Microchipping offers cats a safe and permanent method of identification and means that if a cat does go missing it is more likely to be reunited with its owner.
